

IN THE SPECIFICATION:

Please enter the following corrected paragraphs into the specification as follows:

Page 8, replace paragraph [00029] with the following.

[00029] In one embodiment, the compositions are included in polymer-based insecticide compositions that are impervious to environmental conditions and that release the Grandlure or other pheromone and dichlorvos or other insecticide over a period of time. Such compositions typically include a polymer or copolymer of plastic, Grandlure or an equivalent pheromone, and an insecticide such as dichlorvos. The devices are typically formed into flat sheets, solid pellets, ~~or~~ laminated sheets rectangular or square dispensers compounded, matrix, laminated or sandwiched, with the compositions described herein. In the preferred embodiments, dichlorvos continually migrates to the surface of the device and vaporizes. Dichlorvos is capable of killing boll weevils by its vapor action but it can take up to one hour for mortality to occur. By combining Grandlure with dichlorvos into a single device, cotton boll weevils are more likely to come into direct contact with the lure resulting in a greater dosage to the weevil and a higher percentage of insect mortality before weevils can escape from the capture cylinder.
